Right to work in the UK & Europe

Technical skills

LANGUAGES
C#, SQL, Java, Swift, Kotlin, Python

BACK END
.NET, Razor Pages, Entity Framework, REST APIs, RabbitMQ, Hangfire

DATA
PostgreSQL, Cloud SQL, Firebase

CLOUD & DEVOPS
Google Cloud (Cloud Run, Cloud SQL, image registry), Terraform, Docker, CI/CD, Git & GitHub

TESTING
Unit testing, automated smoke tests

AI-NATIVE DEVELOPMENT
Claude Code, Codex, Claude Design, Junie

MOBILE
SwiftUI, Android (Kotlin)

End-to-end ownership

Presenting & pitching

Working with stakeholders

Team working & leadership

Problem solving

Co-founder and sole engineer of **Nomien**, a B2B coffee marketplace I've built from scratch in **.NET** and run on **Google Cloud** with **Terraform** and an automated, test-gated deployment pipeline. First-class Computer Science graduate from Swansea University, with a strong interest in back-end and cloud engineering.

Experience

Co-founder & Tech Lead – *Nomien* Oct 2025 – Present

Alacrity Foundation Entrepreneurship Programme

- Co-founded a B2B platform where **coffee roasters discover new café partners and sell their guest coffee**, integrating with the back-end systems roasters already run.
- **Sole engineer across the full stack:** architecture, Razor Pages application, PostgreSQL data model and integrations.
- Provisioned the infrastructure as code with **Terraform**: **Cloud Run**, **Cloud SQL** and a container image registry, with separate staging and production environments.
- Built an automated test and deployment pipeline that **only routes traffic to a new Cloud Run revision once its smoke tests pass**.
- Work **AI-natively** with Claude Code, Codex and Claude Design to ship as a one-person engineering team.
- **3 roasters ready to join the pilot and 30+ cafés lined up.** One of two full-time founders, supported by three advisors. Present Nomien at industry events.

.NET Developer Intern – *SeRP, Swansea* Jun 2025 – Sep 2025

C#, .NET, Entity Framework, PostgreSQL, RabbitMQ, Hangfire, Docker

- Developed **Impact Tracking**, a web platform that records the impact of research projects: third-party publications, funding acquired and media coverage.
- Integrated Form.io data collection, persisting JSON payloads to PostgreSQL through **RESTful APIs** and Entity Framework. Used RabbitMQ and Hangfire for background processing and Docker to containerise back-end services.
- **Led unit testing** of the platform's APIs. Worked in a team of 3 developers and a product owner using agile, Jira and GitHub.
- Represented the team at an outreach event held at the **Welsh Parliament**.

Employability Intern – *Swansea University* Sep 2024 – Feb 2025

- Helped deliver a careers fair with **60+ employers and 2,000+ students**, and was a first point of contact for employers and students at open days and events.

Teaching Assistant, Computer Science – *Swansea University* 2022 – 2023

- Supported coding labs of up to 100 students: reviewed code against requirements and best practice, and signed off completed work.

Robotics Team Lead – *Camp America, Chestnut Lake Camp, PA* Summer 2022

- Designed an 8-week unit teaching programming and computer logic to high-school students with Lego Boost robots, and provided pastoral care for 20 children.

Education

BSc Computer Science (First, 73%) – *Swansea University* Sep 2020 – Jul 2025

- Year abroad at **City University of Hong Kong** (2023/24): data science, data visualisation and internet application development.
- First in dissertation: **"Let's Go!"**, a SwiftUI social app encouraging healthy, active lifestyles, with MVVM architecture and Firebase for authentication, data and photo storage.

Interests

- **Volleyball** for 8+ years in the UK and Hong Kong: captain of Swansea's 1st men's team (won the division and promotion), Club Development Officer and Treasurer, SU Sports Executive Committee 2024/25, qualified referee.
- **Bouldering, hiking and the outdoors**, picked up properly during my year in Hong Kong.
